Art Unit: 1641

1) In claim 22, ii), the spelling of "hydroxypropyl" should be corrected.

2) A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

3) Claims 15-27 are provisionally rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 15-21, 27 and 29 of copending Application No. 09/933104. This is a provisional double patenting rejection since the conflicting claims have not in fact been patented.

4) The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

5) Claims 15-27 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for the preparation of monoclonal antibodies specific for rapamycin **using specific immunogens**, does not reasonably provide enablement for the production of rapamycin-specific monoclonal antibodies using **any** rapamycin-carrier conjugate. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to practice the invention commensurate in scope with these claims. Applicants acknowledge the state of the art at page 1 through page 2, line 3 of the specification:

"There have been no previous reports of monoclonal antibodies which recognize rapamycin. There are inherent difficulties in making monoclonal antibodies to rapamycin because rapamycin is not immunogenic and is itself extremely immunosuppressive."

Thus, as stated in the specification and reiterated at page 3, last paragraph of the March 11, 2002 Remarks, rapamycins are considered by applicants to be "the antitheses of the types of compounds

Art Unit: 1641

from which antibodies would be expected to be raised". Given this expectation in the prior art and the description of the required use of the "novel activated derivatives of rapamycin used to make the novel immunogenic conjugates of the invention" (specification, page 2, last paragraph), enablement is clearly present only for the production of monoclonal antibodies using specific 40- or 28-substituted rapamycin derivatives as haptens to prepare the corresponding immunogenic conjugates.
